- 1 4. (As Amended) An optical display apparatus, comprising a
2 hologram device and a light source, wherein the hologram device is a reflection-
3 type hologram formed by:
4 light having information of an object incident on a first side of a first
5 hologram dry plate; and
6 reference light incident on a second side of the first hologram dry
7 plate, the second side of the first hologram dry plate being opposite the first side of
8 the first hologram dry plate, the reference light and the light having the
9 information of the object being arranged to interfere with each other on the first
10 hologram dry plate, wherein
11 a reconstructed image of the object is displayed by light from the
12 light source which is incident on the reflection-type hologram through an
